

Embedded Computing Design Announces Enclustra Wins embedded world North America Best in Show Award

Phoenix, AZ, October 8, 2024. Embedded Computing Design (ECD), a division of OpenSystems Media, and the leading source of how-to design and development information for the embedded industry, today announced that **Enclustra** has been named as a winner of its embedded world Best in Show Awards in the category of **DEVELOPMENT TOOLS & OSs**. All entries are assembled and reviewed by the ECD Content Team, assessed on Design Excellence, Relative Performance and Market Impact. The entries are judged using a 15-point rubric, that assesses design excellence, relative performance, and market impact/disruption.

“For a first-time event, we were astounded by the number of entries we received,” said Rich Nass, EVP, Open Systems Media. “And just as astonishing was the quality of the products entered. There were no “me-too” entries. It’s an honor to award these companies and their design teams for their exemplary work and technical innovation.”

“This award validates our commitment to providing our customers with the best possible FPGA solutions and our continuous efforts in research and development,” said Phillip Bächtold, CEO at Enclustra.
